DATE DISTR. 11 Feb. 1952

SUBJECT Dnepropetrovsk Airfields

NO. OF PAGES 1

THIS IS UNEVALUATED INFORMATION

25X1

1. The airfield, about 2½ km long, was north of Dnepropetrovsk (48°27'N/34°59'E), Ukrainian S.S.R. A four-story flight control building with obstacle lights was located on the field. North and south of the building and also on the south-eastern corner of the field were several hangar-like buildings with arched roofs, probably hangars, repair hangars or similar buildings. White ground lamps illuminated the boundaries.
2. The field was occupied by about 20 small single-engine aircraft, and twin-engine planes of which 43 were once seen in the air. The twin-engine aircraft were low-wing monoplanes with single rudder assembly, plexiglass lower section of nose, section of fuselage forward of wings considerably shorter than section aft of wings. The twin-engine planes usually flew in formations. Firing with aircraft weapons at ground or air targets, AA firing practices, parachute jumps or bomb releases were not observed.
3. Another airfield, but smaller and of minor importance, was located in the south or southeastern section of the town, about 4 km from the PW camp. Two or three biplanes were seen over the field. There was little flying activity.
